

As promised we want to keep you updated about our developments of new filters and filter products.

Below you can see an example of a Air filter. We can construct any model in cooperation with you. Also the filter medium is just an example. In this case we used a 20 micron nominal cellulose.

We are well known with the norms and Classes that means that we can advice you to choose the optimal filter medium specific for your application.

Moreover we can advice you about the size and the surface that is needed to achieve the optimum result.

(We look at parameters like speed, resistance, needed capacity etc.)

In case you have questions or an inquiry please do not hesitate to contact us and we go with you into any detail.

Till soon.

The Filmoor team
